Introduction to project work

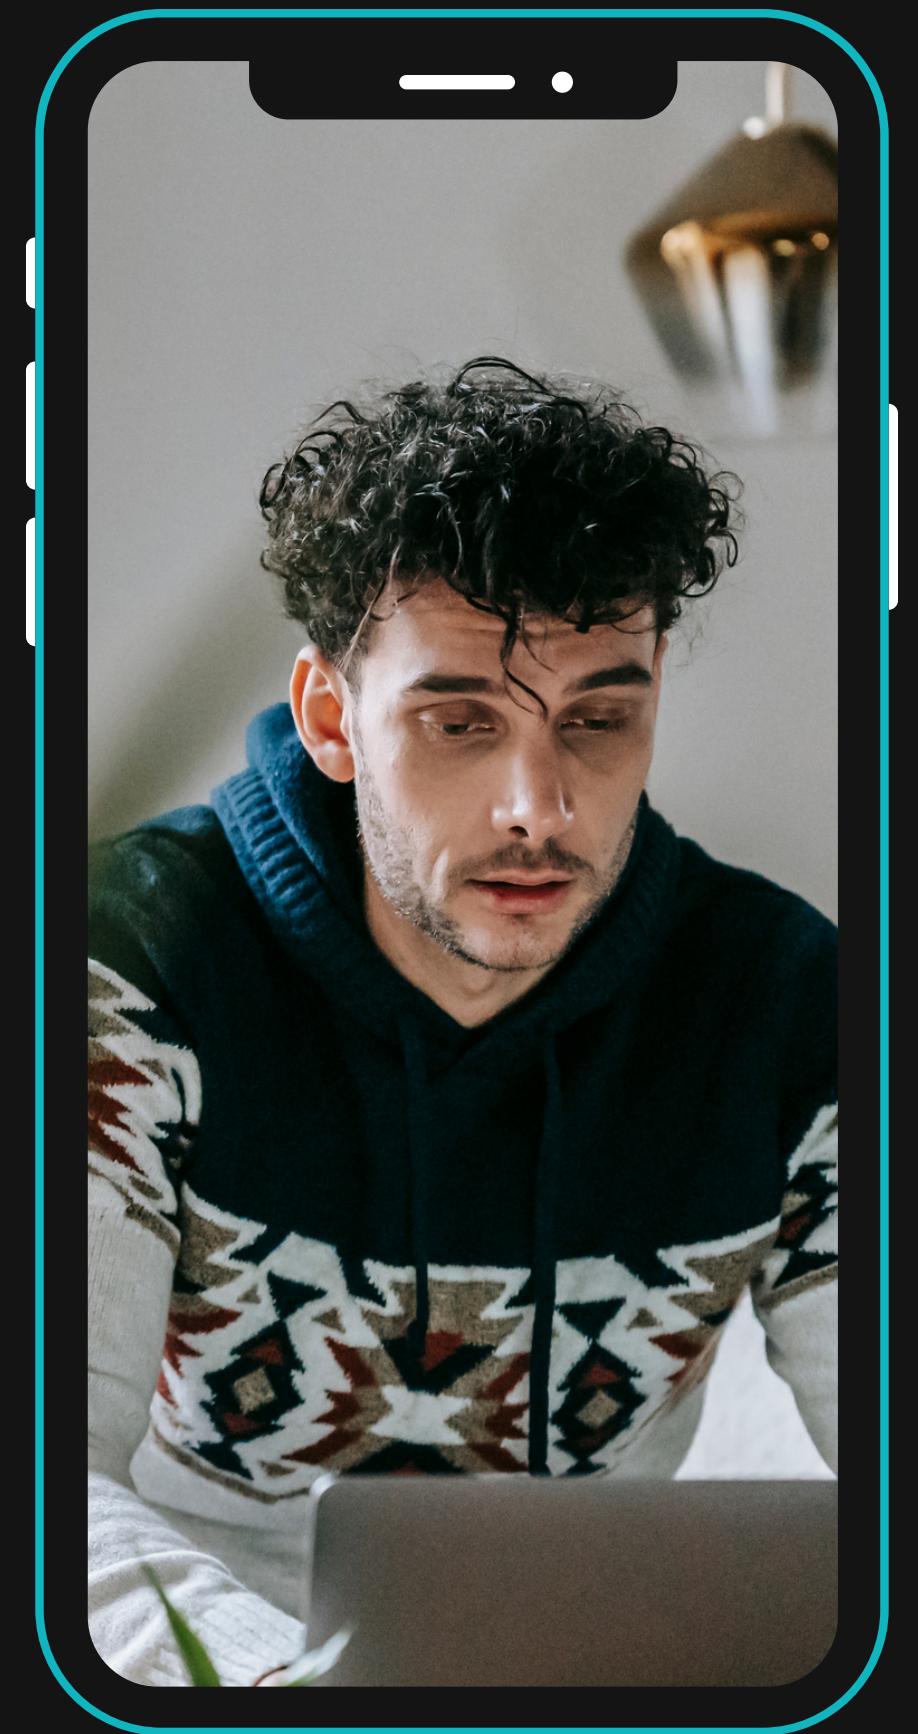

Anel Kassenova | Zukhra Mazhitova | Botagoz Zhumabekova

Problem

Today people finding it hard to choose a career path they would follow and even after doing so job market is tough to get through and get hired. Another major problem is different companies use various platforms to publish their vacancies and right people for this role can not even apply to it due to not finding it.

Relevance

The given project is willing two address multiple problems of job searchers in this market: starting from choosing the right and in-demand profession, finding job that is suitable for you and choosing convenient platform.

Goals

Addressing unemployment problem in Kazakhstan among fresh graduates

Collecting all the job ads and vacancies into one platform

Identifying most required skills

Analyzing jobs by regions

Hypothesis

1.

IT and Developing Job are
the most paid ones.

2.

There are more jobs in
larger regions.

3.

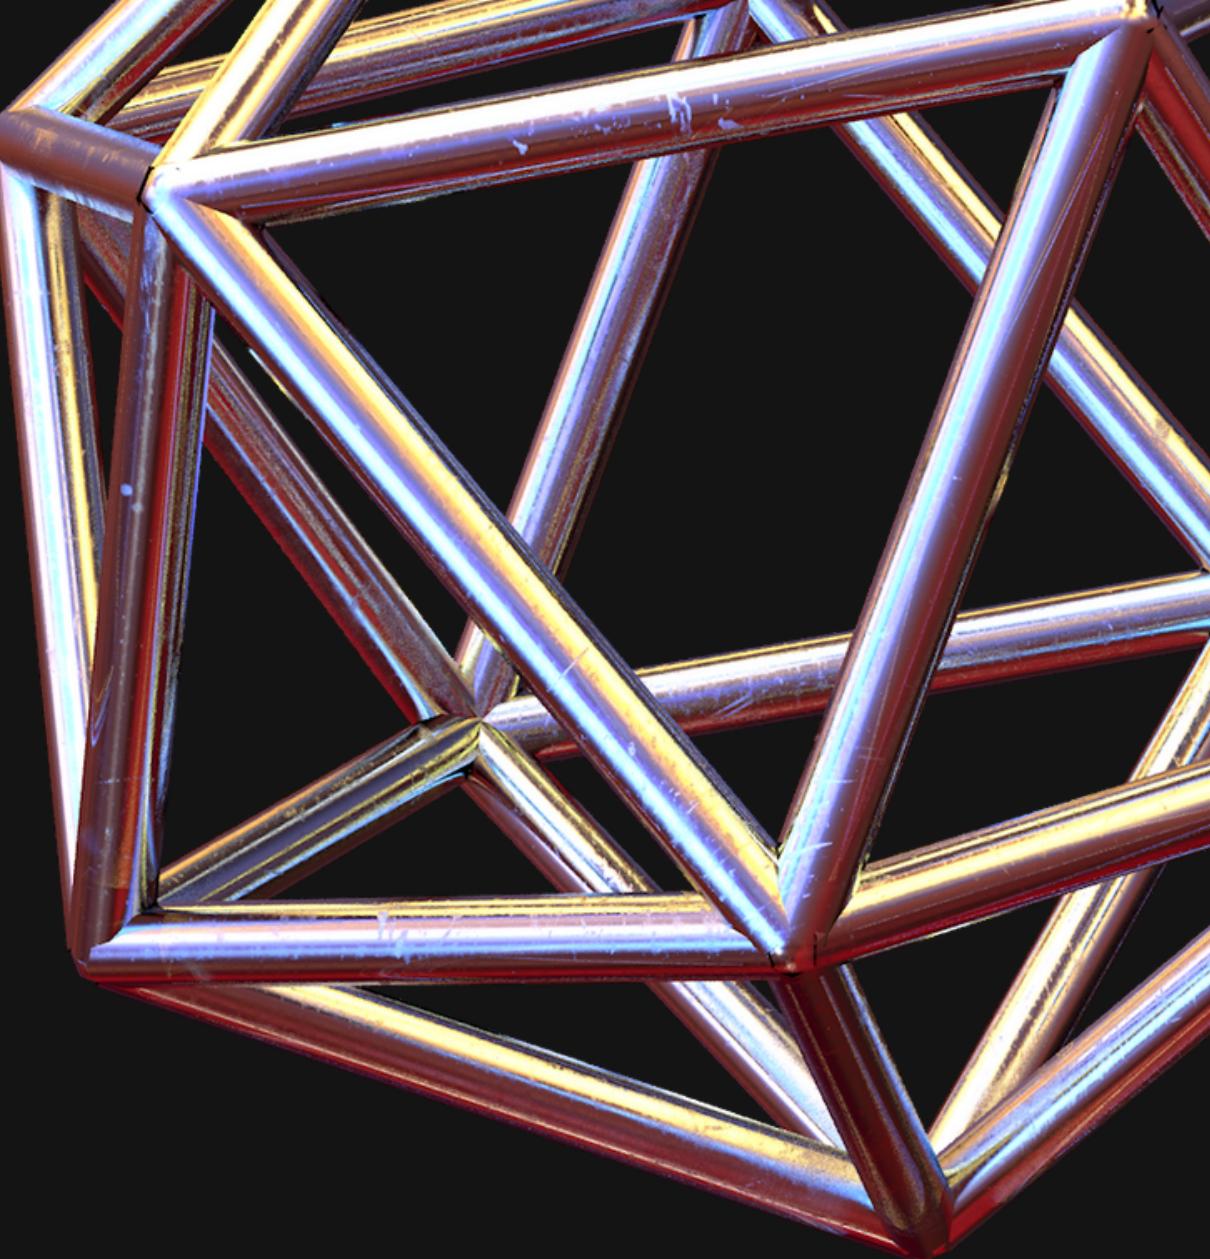

There are less qualified human
resources for jobs among locals.

4.

Today's vacancies are
mostly require experience
rather than education.

5.

Технология 5-го
поколения обеспечивает
больше возможностей
подключения и более
высокую скорость

Data

- Parsing all popular job searching platforms: Hh.kz, Job.kz, Rabota.kz, etc
- Parsing telegram channels
- Linkedin posts parsing
