Introduction to project work

Anel Kassenova | Zukhra Mazhitova | Botagoz Zhumabekova

Problem

Today people finding it hard to choose a career path they would follow and even after doing so job market is tough to get through and get hired. Another major problem is different companies use various platforms to publish their vacancies and right people for this role can not even apply due to not finding it.

Relevance

The given project is willing to address multiple problems of job searchers in this market: starting from choosing the right and in-demand profession, finding job that is suitable for you and choosing convenient platform.

Goals

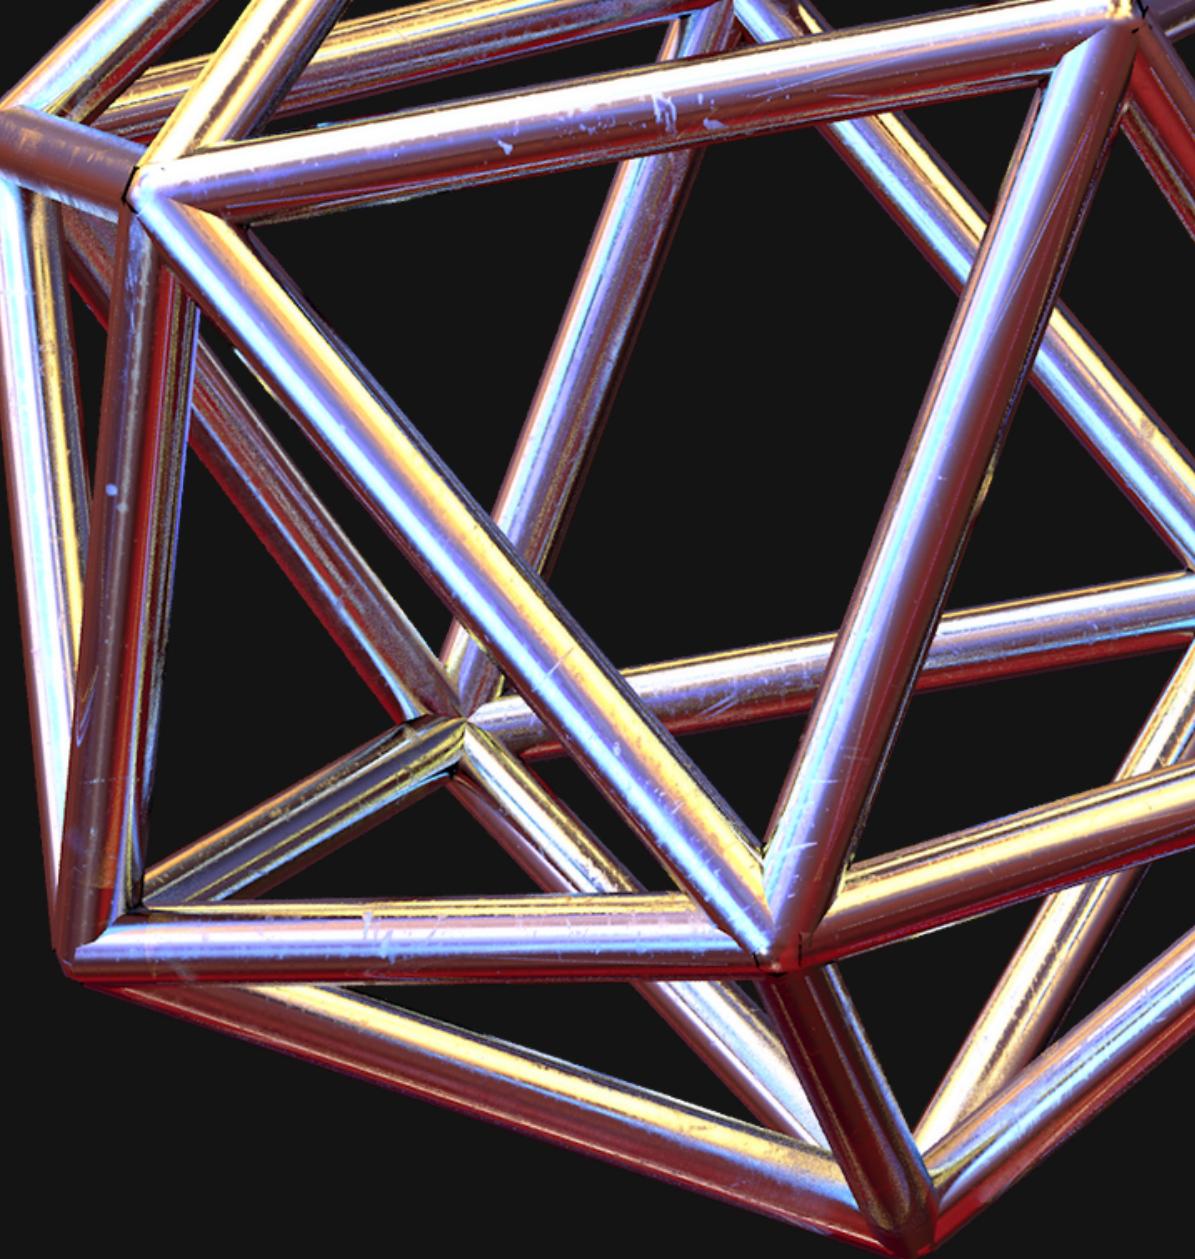

Addressing unemployment problem in Kazakhstan among fresh graduates

Collecting all the job ads and vacancies into one platform

Identifying most required skills

Analyzing jobs by regions

Hypothesis

1. IT and Developing Job are the most paid ones.
2. It is easier to find a job in larger cities.
3. There are less qualified human resources for jobs among locals.
4. Today's vacancies are mostly require experience rather than education.
5. Higher grading jobs require masters or higher degrees.

Data

- Parsing all popular job searching platforms: Hh.kz, Job.kz, Rabota.kz, etc
- Parsing telegram channels
- Linkedin posts parsing
